ABOUT US

We are the Indiana University SharePoint Users' Group community consisting of SharePoint End-Users, Designers, Developers, Site Collection Administrators, and Farm Administrators. The IUSPUG facilitates communication and shares resources including documentation, video presentations, discussion forums, and wikis. Our goal as a group is to bring together the functional and technical users to better improve our knowledge and understanding of SharePoint technologies.

SharePoint technologies provides tools to rapidly respond to University business needs, enrich collaborative interaction by empowering the user the ability to share, create, and connect with University constituents more effectively. The IUSPUG Users' Group is a gateway to connect with other SharePoint users enabling us to share and gain knowledge more effectively and further supports our operational needs by leveraging the community.

IU SHAREPOINT USERS' GROUP MISSION

The Indiana University SharePoint Users' Group Mission is to bring together the functional and technical users to better improve our knowledge and understanding of SharePoint technologies.

JOIN THE GROUP

Visit <http://iuspug.iu.edu> and click the "Join the Group" button to gain access to site resources and receive monthly IUSPUG group e-mails. Our group will provide you the support and tools to engage and connect with the Indiana University SharePoint community members.

MONTHLY MEETINGS

Please see the IUSPUG website for monthly meeting information.

WHAT IS SHAREPOINT 2010?

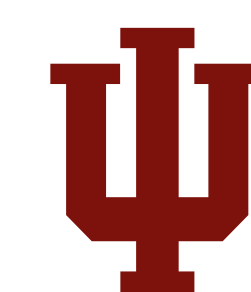

SharePoint 2010 is next generation of Business Collaboration Platform for the Enterprise and the Web. SharePoint 2010 now provides cross browser support for several commonly used web browsers such as Internet Explorer, Safari, Firefox, and Chrome.

In SharePoint 2010, a vast array of Business Intelligence tools are available which include Excel Services, Visio Services, Reporting Services, Integration Services, Analysis Services, Excel Power Pivot for SharePoint which enables users the power to create self-service BI solutions, and PerformancePoint Services which provides flexible, easy-to-use tools for building dashboards, scorecards, and key performance indicators (KPIs). Combining SharePoint with Microsoft Office Excel, Visio, and Access users are also able to make line of business connections to databases which are refreshed and updated as data changes.

New to SharePoint technologies

- New to the SharePoint technologies is Microsoft Office Web Apps which allows you to edit Microsoft Word, Excel, PowerPoint, and OneNote documents directly from SharePoint using your browser which includes mobile devices.
- SharePoint has also redesigned its Graphical User Interface "The Ribbon, similar to the Office 2010 interface" which improves the ability to manage content and website customization and authoring.
- SharePoint has enhanced records management functionality which further enables the tracking of content by using Alerts and improved Workflow for routing and prioritizing content. Document versioning, tasks, surveys, discussions, announcements, and calendars continue to be supported.
- SharePoint continues to provide improved integrations for Exchange two-way calendaring, assigning tasks, and mail-enabled document libraries which allow you to archive e-mail discussions as they happen, save e-mailed documents, and show e-mailed meetings on site calendars.
- The added value of the personal SharePoint My Sites has also been enhanced and improved making the task of locating and connecting others within the University easier. The new blogs improves your ability to contribute to the University by publishing your knowledge and then creating tag clouds and relational connectors to more easily locate important data.
- Enhanced wiki support allows you to copy and paste content and images directly into SharePoint which makes deployment of important information easier and quicker to achieve.
- Taxonomy services and Managed Metadata services are also new to SharePoint 2010.

This is just the beginning...
